

# Enabling accountable care through EHR implementation & support

**Priority Action Table, 2017 Home Care Summit  
November 14 2017  
Gosia Radaczynska**

## A new EHR should support:

- Placing the client at the centre of each action;
- The provision of better, safer, evidence-based delivery of care;
- Improving communication and collaboration among care providers in the delivery of care;
- Improved access to data for the purposes of resource planning, care delivery, and outcomes reporting; and
- Streamlining business practices

# The accountable home care visit

- Improved transitions of care through Integrations with local health system referral services

- Improve communication with client
- Improved communication between integrated teams

- Can the care worker see relevant clinical notes, care plans, and progress notes?
- Charting at the point of care decreases transcription errors, reduces missed information, improves quality and transitions of care
- Chart medications at point of care to reduce incidents
- Risk alerts for staff

- Track process and outcome metrics (missed visits, care plan adherence, health monitoring, etc.)

- Integrate to billing and payroll for accurate reporting to funder

- Has the care worker clocked in?
- Can you check in real time?

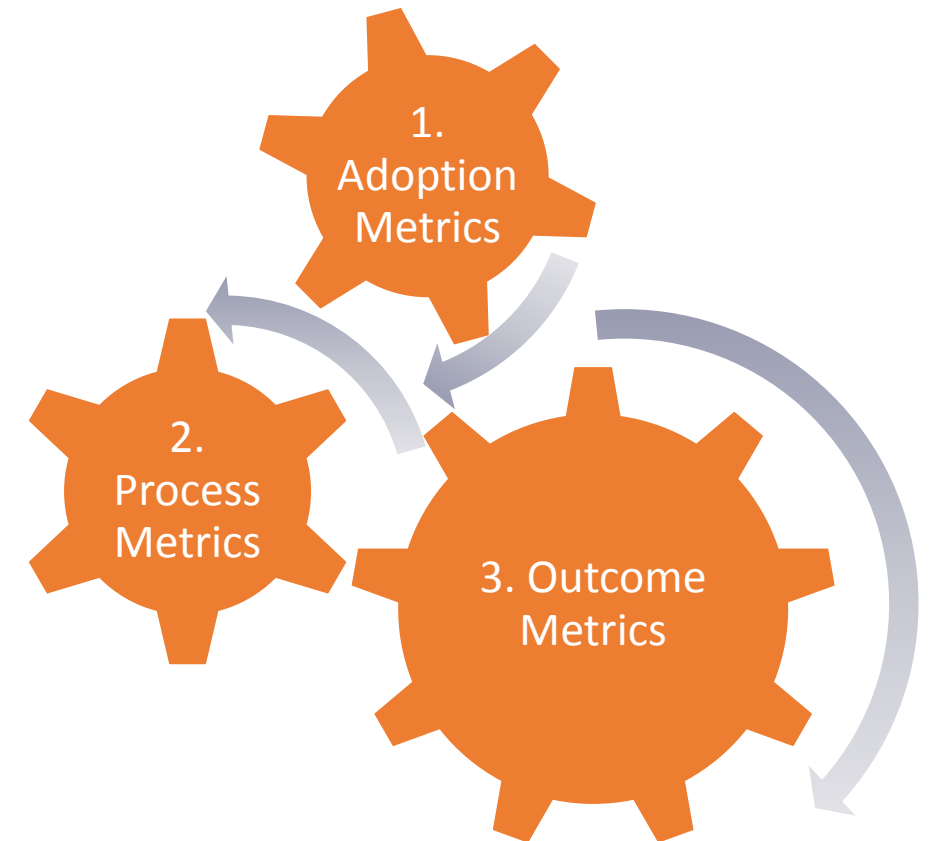

At a practical level,  
how do we get to  
the EHR promised  
land of **accountable**,  
measurable,  
performance  
improvement in  
home care?

- Determine what and when to measure
- Implement successfully
- Win at support

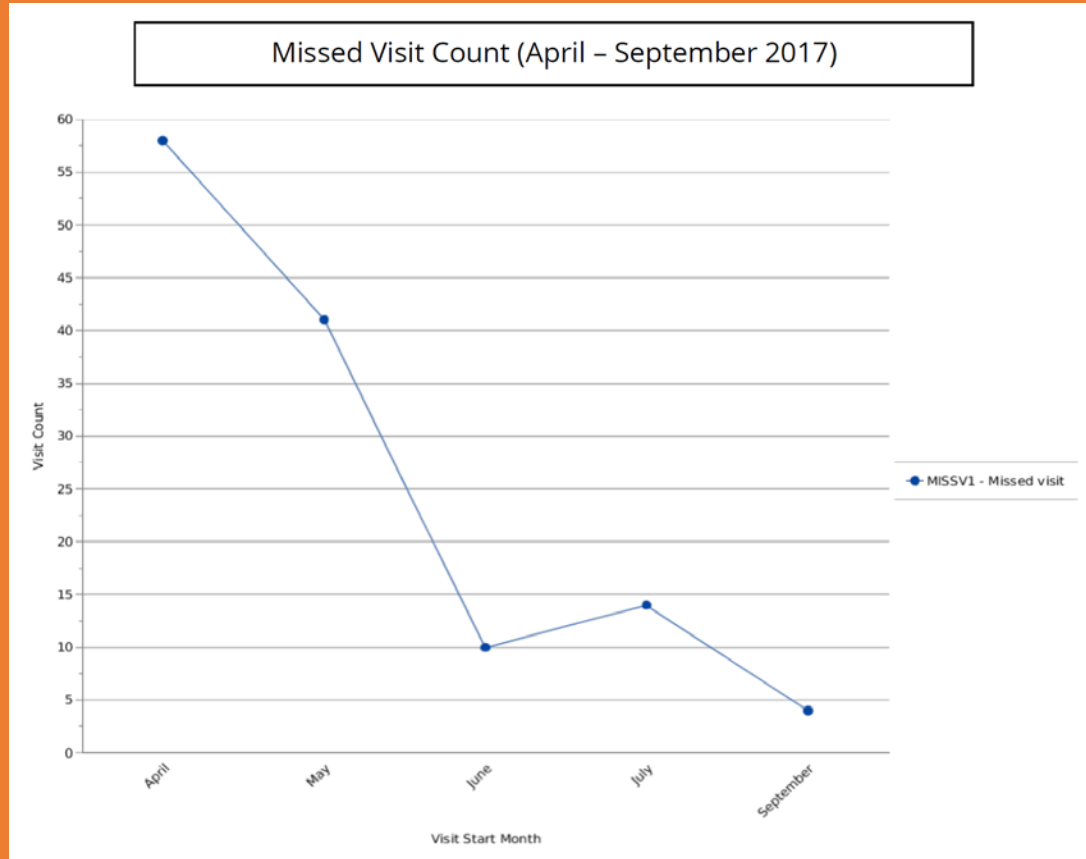

## Measuring performance improvements – a commitment to accountability

Metric	How it can be used...
Adoption	<ul style="list-style-type: none"><li>• Understand adoption to target optimization efforts</li><li>• Employ usage statistics to improve workflow</li><li>• Set minimum usage thresholds to support next stage of metrics</li></ul>
Process	<ul style="list-style-type: none"><li>• Understand practice patterns, trends, and variation</li><li>• Identify variation in the application of standards</li><li>• Identify strengths and gaps in how your EHR is being used to help deliver quality care</li></ul>
Outcome	<ul style="list-style-type: none"><li>• Identify improvement opportunities in outcomes reporting</li><li>• Improve care delivery</li><li>• Streamlining business practices</li></ul>

## Measuring performance improvements: process & business outcome metric examples

Almost eliminated missed visits as a result of active monitoring

Reduced time it took to run payroll from “a couple days on an off” to 15 minutes

- Free up time for payroll clerk who wears multiple hats

## Measuring performance improvements: Remote patient monitoring for COPD and CHF – conclusions from SmartCoach pilot by CBI Health Group

### 01

Remote Monitoring of chronically ill (COPD/CHF) patients led to a 73% reduction in ER utilization and 64% reduction in the number of hospitalizations.

On a per patient basis, the reduction in number of clients with at least one hospitalization) would be 35% (from 57% to 22%).

### 02

1. Over a 3-month period, the RPM costs approximately \$50,000 but the cost saving could be more than \$150,000 for a sample of 74 patients.

2. Ongoing health system utilization post discharge from an RPM program is 35% of the pre-intervention level as patients learn to better manage their chronic diseases

# Key take-aways for implementing and supporting an EHR in the home care setting

Challenge	Success Factor
Resource constraints	<ul style="list-style-type: none"> <li>• Cross train an inter-professional team of users (schedulers, care providers, office staff)</li> <li>• Recognize and plan for the team to ramp-up</li> </ul>
Pilotitis [pahy-luht-ahy-tis] – the inability to break out of pilot stage	<ul style="list-style-type: none"> <li>• A quick and efficient implementation is the best cure</li> <li>• Set clear stabilization criteria</li> <li>• Normalize learning and ongoing improvements as part of “normal operations”</li> </ul>
Change management	<ul style="list-style-type: none"> <li>• An EHR is the digital representation of your physical office</li> <li>• Free up their day</li> <li>• Practical things: Are workstations set up as best as they can be (2 monitors), is internet speed good, etc.</li> </ul>
Buy-in	<ul style="list-style-type: none"> <li>• The right champions</li> <li>• Clear goals</li> </ul>
Support	<ul style="list-style-type: none"> <li>• Remove barriers to entry</li> <li>• Be consistent, accessible, and reliable</li> </ul>
Patient Health Portals	<ul style="list-style-type: none"> <li>• Plan for client/patient training</li> <li>• Policies and procedures to support PHI</li> </ul>
Data won't tell me things I don't already know	<ul style="list-style-type: none"> <li>• Accountability over time</li> <li>• Trend monitoring , could identify winning solutions that would otherwise get missed</li> </ul>
Implementation is just the beginning	<ul style="list-style-type: none"> <li>• Determine post implementation support structure at the start of implementation</li> <li>• Get ready to optimize!</li> </ul>
