Land Acknowledgement

Artist Credit: Patrick Hunter

We recognize with humility and gratitude that Canada is located in the traditional, historical and ceded and unceded Lands of First Nation, Inuit and Metis Peoples. On behalf of us all, we acknowledge and pay respect to the Indigenous peoples past, present and future who continue to work, educate and contribute to the strength of this country.

Reflecting on What You Heard...

Share in the Chat:

If you joined us last time when we discussed shared decision-making, what new skill, knowledge or approach did you test or incorporate into your daily care or practice?

Collaborative Care Planning

An integrated approach to supporting responsive behaviours for older adults and their families ensures:

- Holistic care, tailored to the individual's culture, values and beliefs, and is likely to identify unmet needs for people and their caregivers.
- Integrated approaches draw on the varied strengths, expertise and experience team members and contributes to better communication, transitions and engagement of the person and their family.
- Family caregivers receive clear, coordinated information and are involved in planning and delivery of care.
- Proactive, integrated care can help better equip caregivers and lessen their emotional worry, and help lessen factors contributing to burnout.

Caring Together: Integrated Approaches to Support Responsive Behaviours in Dementia Care

Kim Schryburt-Brown (she/her)
MSc, BScOT, OT Reg. (Ont.)
June 25, 2025

Providence Care

more than healthcare.

10 Warning Signs of Dementia

1. Memory change affecting day-to-day abilities
2. Difficulty doing familiar tasks
3. Changes in language and communication
4. Challenges understanding visual and spatial information
5. Disorientation to time and place
6. Impaired judgment
7. Problems with abstract thinking
8. Misplacing things
9. Changes in mood, personality and behaviour
10. Loss of initiative

What About Responsive Behaviours?

In the context of dementia and other geriatric mental health conditions,

responsive behaviours or personal expressions

are the preferred terms used to describe how

a person's words and actions are a

form of meaningful communication,

often of unmet needs

Why should we think of unmet needs?

Brain changes due to dementia

➡ Person does not think the way they used to

➡ Person does not behave the way they used to

What are the different types of responsive behaviours?

Vocal Expressions (repetitive)

Motor Expressions (repetitive)

Responsive Behaviours of Risk

Sexual Expressions

Verbal Expressions

Physical Expressions

Non-Pharmacological interventions should be used first!

All About Me – A Conversation Starter Instructions

Last date revised: *Insert date of the last time the revision, this is to ensure that the information is up-to-date*

Note: as much as possible, this Conversation Starter should be written from the individual's perspective.

I like to be called...
Individual's name, nickname or title

In the past I...
In this section, note past careers, places the person lived, favourite events or activities and important aspects of their past.

I enjoy...
Note the things the individual enjoys such as favourite foods, activities, topics of conversation, people, music, etc.

I don't like...
Note the individual's dislikes, such as severe allergies or types of foods, music, weather, topics of conversation. This information can help others understand some possible triggers that make the individual uncomfortable.

A typical day for me could include...
Note how the individual likes to have their day start and end, such as morning and evening routines, social and leisure activities, and meal times. What brings comfort and pleasure?

Who knows me best?
List the names and relationships that are important to the individual, such as whom she confides in, people she enjoys spending time with, and who the individual identifies as their "family". Note this may include people who are no longer living or who reside far away.

Step 1 Background (Complete prior to Data Collection Sheet)

1. a) Check the reason(s) for completing BSO-DOS[®]:

- ☐ Baseline/Admission ☐ Evaluation of a new strategy/approach ☐ New behaviour:
☐ Transition/Move ☐ Adjustment of medications ☐ Other:
☐ Change in behaviour ☐ Support for a referral/transfer

b) BSO-DOS[®] start date: BSO-DOS[®] stop date:

Section 1 completed by (print name): Signature:

Step 2 Complete the Data Collection Sheet

2. Proceed to the next page and complete the Data Collection Sheet. Once finished, return back to this page and continue to Step 3.

Step 3 Analysis and Planning (Use the completed Data Collection Sheet)

3. a) Highlight the numbers on the Data Collection Sheet according to the colour-coded legend in order to identify patterns.

b) Use the table below to calculate how often per day the behaviour(s) of interest occurred (not every row needs to be calculated).

	Total the blocks for each day (Add up the number of blocks for each category per day)					Total the ½ hour blocks (Add up the number of blocks for each category over 5 days)	Calculate the average number of 1-hour blocks per day (Divide the total blocks by 10. Hint: move the decimal one space left)	Concerns		
	Day 1	Day 2	Day 3	Day 4	Day 5			Frequency	Duration	Risk
1 Sleeping						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Awake/Calm						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Positively Engaged						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Vocal Expressions						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Motor Expressions						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6 Sexual Expression of Risk						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7 Verbal Expression of Risk						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8 Physical Expression of Risk						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10						=	÷10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Table completed by (print name): Signature:

c) Document the following within a progress note:

- A summary of the completed analysis table
- What the BSO-DOS[®] data reveal (e.g. types of behaviours expressed, patterns, time of day, broken sleep)
- Possible causes and contributing factors (consider collected context and personhood information)
- Next steps, such as:
 - New non-pharmacological strategies
 - Medication adjustment/review
 - Care plan update
 - Referral(s) initiated
 - Clinical huddle/meeting: share results and updates to plan
 - Consult/meet with Substitute Decision Maker (SDM)
- Start ABC charting around particular events/behaviour
- Continue BSO-DOS[®] for another 5 days
- Repeat BSO-DOS[®] starting on a specific date
- Other planned steps

Progress note completed by (print name): Signature:

*Mandatory column

Observed Behaviours

(For #3-8, check specific behaviours as you observe)

1 (Blue) Sleeping

2 (Green) Awake/calm

3 (Green) Positively engaged

- ☐ Conversing ☐ Hugging ☐ Singing
☐ Engaging in activity ☐ Kissing ☐ Smiling
☐ Hand holding ☐ Laughing ☐ Other:

4 (Yellow) Vocal expressions (repetitive)

- ☐ Asking questions ☐ Humming ☐ Requests
☐ Crying ☐ Moaning ☐ Sighing
☐ Grunting ☐ Repeating words ☐ Other:

5 (Yellow) Motor expressions (repetitive)

- ☐ Banging/rattling ☐ Fidgeting ☐ Rummaging
☐ Collecting ☐ Grinding teeth ☐ Trying to leave
☐ Disrobing ☐ Pacing ☐ Other:
☐ Entering others' spaces ☐ Rocking

6 (Pink) Sexual expression of risk

- ☐ Sexual comments/questions ☐ Self-pleasuring in others' presence
☐ Requesting sexual favours ☐ Unwanted touching
☐ Sexual threats ☐ Forcing others into sexual acts
☐ Sexual gestures ☐ Other:
☐ Exposing genitals

7 (Purple) Verbal expression of risk

- ☐ Derogatory insults ☐ Swearing ☐ Other:
☐ Screaming/yelling ☐ Threatening

8 (Orange) Physical expression of risk

- ☐ Biting ☐ Kicking ☐ Self-injuring
☐ Choking others ☐ Pinching ☐ Spitting
☐ Grabbing ☐ Punching ☐ Throwing
☐ Hair pulling ☐ Pushing ☐ Other:
☐ Hitting/slapping ☐ Scratching

PIECES™ Approach

Is far more than a clinical assessment framework; and much more than the PIECES acronym alone!

It guides focused, time-sensitive and meaningful conversations to support the Person living with complexity.

The **Why** that drives the PIECES approach is the best possible Person and Care Partner centred care

What will impact Team collaborative care is the **PIECES 3-Question Template**

How the 3-Q Template is applied in practice matters! Best possible care is realized when the Team **acts together**

A respectful, honouring approach that begins with the Person and Care Partner and includes all members of the Team!

PIECES 3 Question Template

Q1- What are the priority concerns? Is this a change for the person?

Q2 – What are the RISKS and possible causes?
Think PIECES

Q3 - What are the actions?
Investigations
Interactions
Interventions

[Pieces Canada](http://PiecesCanada.ca)

P – Physical - Disease, drugs, discomfort, disability and delirium

I- Intellectual – amnesia, agnosia, apraxia, aphasia, anosognosia, altered perceptions, apathy

E – Emotional – mood, adjustment issues, suicidality, substance use, trauma, psychosis

C- Capabilities – What can the person do?

E – Environment – enabling and disabling factors

S – Social – The person's life story, social network, culture, spirituality, gender identity and sexuality

Intellectual – The 7 A's

Anosognosia – don't know that they don't know

Amnesia – loss of memory (short term, then more remote)

Aphasia – loss of receptive and/or expressive language

Agnosia – loss of recognition

Apraxia – loss of purposeful movement

Altered Perception – usually visual perception

Apathy – loss of initiation

What About Mrs. Khan?

Anosognosia – Not aware of cognitive changes

Amnesia – Medication issues, leaving stove on, confusing appointments, frequent calls to daughter

Aphasia – Unsure – need more information

Agnosia – Does she recognize her current home? Bathroom?

Toiletries? Insulin?

Apraxia – Not likely

Altered Perception – Could be underlying cause of “agitation in the evening”

Apathy – Could be cause of missing insulin doses

If we were to suggest a transition...

Meet Mrs. Amina Khan

- Mrs Amina Khan is an 82 year old woman and widow who immigrated to Canada over 40 years ago and currently lives in an apartment with her adult son, who travels frequently for work.
- Her primary family support and carer is her adult daughter who lives within 30 minutes of her apartment.
- Her primary language is Urdu, and although she understands English, she prefers to speak in Urdu when discussing personal or complex matters.
- Mrs. Khan herself, played an active caregiving role within her extended family, and her own values are shaped by strong cultural values around aging and family responsibility.
- She receives publicly funded home care supports (personal care provider, medication management and currently, wound care for diabetic foot wound).

Meet Mrs. Amina Khan

Cognitive & Behavioural Presentation:

- Cognitive decline suggestive of progression beyond Mild Cognitive Impairment (MCI); possible early-stage vascular dementia under consideration by primary care.
- In recent months, she has shown increasing cognitive and behavioral symptoms: forgetting insulin doses, leaving the stove on, and missing or confusing appointments.
- She demonstrates signs of distress in the evenings, including pacing, making repeated phone calls with the same concerns, and expressing fear that someone is trying to enter her home.
- When items are misplaced, she occasionally accuses others of theft; even when the item is located, her suspicion can persist.
- These symptoms have begun to strain the home care relationship.

Meet Mrs. Amina Khan

Current Challenges:

- **Evening distress and agitation:** Experiences evening pacing, repeated phone calls, and fears of intruders—signs of anxiety and perceptual changes linked to advancing cognitive decline.
- **Suspicion and mistrust:** Accuses others of theft when items are misplaced. Suspicion persists even after resolution, reflecting memory loss and difficulty distinguishing reality from misinterpretation.
- **Refusal of care and verbal distress:** Frequently refuses bathing or hygiene care, raises voice, or asks unfamiliar caregivers to leave, especially during tasks involving close personal contact.
- **Cultural and language barriers:** Engagement fluctuates due to caregivers not speaking Urdu or sharing her cultural background, limiting communication and increasing discomfort during care interactions.
- **Strained care relationships:** Responsive behaviours have triggered a formal care plan review, with home care staff expressing concern over escalating distress and inconsistent cooperation during visits.

Reflect on What You Heard...

Based on today's discussion, what can you add to or test in your daily care or practices that might better support the person and caregiver in addressing responsive behaviours?

Join us next time to share and hear from others.
